Introduction

What does Somak do?

If you could have your wish when it came to buying software, what would it be? Well, you would want quality software. And you would want the assurance of qualified technical assistance when you needed help. And, of course, you would want the software to be inexpensive. Maybe you want all of these things?

Somak Software offers you these benefits. We distribute high-quality software for business, education, entertainment, desktop publishing, design, and many other uses. We select and distribute only the finest programs in each category, to insure you the maximum value for your dollar. And we stand behind our software. Every program on our disks has been tested with the latest Macintosh hardware, and is guaranteed to work as described, or we'll exchange it for you.

How much does it cost?

You pay Somak Software a small service charge for each disk that you order. This service charge covers research, duplication, technical assistance, and other related expenses. Service charges start at only $8.99 per disk, and when you order more disks, the price goes down. For complete pricing information, see the order form on page 17. Postage and handling charges of $4.00 are added to each order shipped within the continental US and Canada. Shipping charges to other areas are higher; please call for details.

What else do I need?

Our software is provided on double-sided disks, so you'll need a Mac equipped with an 800K drive. All programs have been tested on the Macintosh Plus, Macintosh SE, and Macintosh II for compatibility, and unless otherwise indicated, run on all three machines.

Some software categories have specific requirements. The LaserWriter fonts described on page 15 require a LaserWriter, LaserWriter Plus, LaserWriter II or LaserWriter II NTX. These fonts do not work on the LaserWriter II SC. The Hypercard stacks described on pages 24 through 28 require Apple's HyperCard software. If your Macintosh did not come with a copy of HyperCard, contact your local dealer to purchase one.

The networking software described on page 29 requires two or more Macintoshes equipped with an AppleTalk/LocalTalk network. The Macintosh II software described on pages 30 and 31 requires a Macintosh II with 8-bit video card and monochrome or color monitor. Any other program requirements or incompatibilities will be explained in that specific program's description.

OK, now what?

Please read the information about "shareware" software distribution on the next page. Then, begin reading the software descriptions on page 6. We're confident that you'll find software that interests you. Write down the disk numbers you want to order as you go. You'll find an order form in the center of the catalog that you can fill out, and then give us a call or mail in your order. You'll be pleasantly surprised! Software really can be all the things you want it to be...

About shareware...

What is it?

Our software comes in two flavors – shareware programs and non-shareware programs. It's a very important distinction, so we've indicated next to the name of each program whether it is or isn't shareware. But you're still asking, what is shareware software, anyway?

Shareware is a method of software distribution that cuts out the middleman; the software author doesn't have to pay for packaging, advertising, and other marketing expenses, and the customer gets to do something very rare in the software marketplace – try out the programs at home, on their machine, before deciding whether the programs are worth paying for.

Shareware programs contain a notice, either in the program itself, or in the accompanying instructions, asking the user to try out the software, decide if they like it, and pay a registration fee directly to the author if they decide to keep it. Sometimes this registration fee also entitles the user to upgrades or enhanced versions, or perhaps expanded documentation.

Somak Software strongly encourages our customers to pay the registration fee for shareware software that they decide to keep and use. Usually this fee is very low; between $2 and $20 dollars. If the authors are not rewarded for their efforts, they may decide it's not worth it, and we would lose their talents forever. Here's a parable that graphically illustrates everyone's shareware obligation...

Once upon a time...

"After conquering a local tyrant, a village decided to put on a big shindig to celebrate their new freedom. Every villager agreed to bring two skins of their best wine, which would all be poured into a great vat to symbolize the unity with which they fought. One villager (every village has at least one) was the stingy sort who decided he would put water in his skins instead of wine, calculating that the dilution would go unnoticed. He made sure no one discovered his plot as the entire village stood in line, emptying their skins of wine into the vat.

Finally came the evening of the great shindig. As the villagers gathered with their tankards around the vat, the newly appointed leader gave a speech that inspired one and all. Finally, the villagers suggested that the leader be first to fill his tankard from the vat, and the leader happily agreed.

When the leader placed his tankard under the vat and turned forth the flow of wine, he was surprised to find that his glass was filled with clear water."

You can see that it really is everyone's responsibility to be honest when it comes to shareware software. If you don't use a program, don't register for it. But if you do use it, and want to thank the author for the opportunity to try it out before you pay, please register and keep the shareware system alive. Now, on to the software descriptions!

Business software

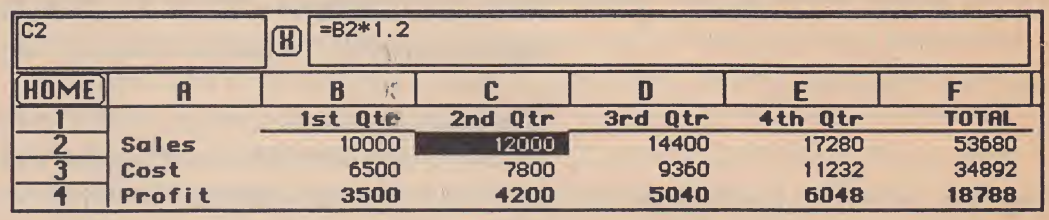
101 BusinessWare Volume 1

Six powerful programs for your small business, from payroll and amortization to a full-featured spreadsheet!

The BiPlane spreadsheet package includes a desk accessory that gives you access to your worksheets within other applications.

Amortize 2.4 (shareware) – A loan amortization calculator.
Calculate loan amortization schedules quickly and easily with this excellent program. Schedules can be printed directly or saved as text files for use in other applications.

BIPlane 1.02 (shareware) – A full-featured spreadsheet in a desk accessory.
Enjoy the benefits of a very capable spreadsheet program anytime, within any other application! BiPlane has a number of features not found in other spreadsheets, like individual cell formatting. Also includes a stand-alone version with additional functions, larger worksheet size, and other enhancements.



C2 | =B2*1.2

HOME	A	B	C	D	E	F
1		1st Qtr	2nd Qtr	3rd Qtr	4th Qtr	TOTAL
2	Sales	10000	12000	14400	17280	53680
3	Cost	6500	7800	9360	11232	34892
4	Profit	3500	4200	5040	6048	18788

ExChequer (shareware) – A payroll accounting system for small business.
Managing your payroll is a snap with ExChequer. It calculates state, federal, and FICA taxes and prints a multitude of payroll reports. You'll receive the limited version, capable of handling up to five employees. After registering ExChequer with the author, you'll receive an enhanced version that manages the payroll records for 100 employees.

Financial Calc (shareware) – A versatile money calculator with six functions.
Calculate the time value of money with compound amount, present worth, sinking fund, series compound amount, capital recovery, and series present worth formulas.

Ledger d'Main – A simple cash accounting program.
Even though Ledger d'Main isn't going to replace the functionality of expensive commercial accounting software, you may find that it suits your needs. Checks are entered into the database, and reports can then be calculated and printed. NOTE: Ledger d'Main does not work with the LaserWriter printer.

Option Pricer – Value puts and calls in your stock portfolio.
Enter six pieces of information, such as the current stock price, expiration day of the option, etc. and Option Pricer will evaluate the situation and recommend whether to hold or sell the call or put.

102 SoftStart Worksheets

A collection of worksheets for personal finance and business analysis. Requires Microsoft Excel or Microsoft Multiplan.

Personal finance worksheets (shareware)
Included are worksheets and instructions for investment analysis, portfolio management, budgeting, mortgage analysis, and checkbook and credit card management.

Business analysis worksheets (shareware)
This collection of worksheets is designed for small business financial analysis. Includes cash flow budgeting, payables/receivables analysis, break-even analysis, and an integrated set of payroll templates.

Mortgage – Calculate mortgage amortization schedules.
Not a part of the SoftStart package, this bonus worksheet calculates an amortization schedule, and also tracks reduction in principle, cumulative interest, and cumulative deduction. This worksheet works only with Microsoft Excel.

103 Worksheets for Excel

Eighteen worksheets and macros, plus a unique add-on application. This disk requires Microsoft Excel.

Pegboard (shareware) – A bookkeeping system for small business.
A collection of linked worksheets that implement an electronic version of the popular one-write pegboard system.

Car Loan – Calculate payment amounts for auto loans.

Conversion Tables (shareware) – Over 150 unit and currency conversions.

MacDep – A macro to figure straight-line depreciation.

Optima Best Answer (demo) – An optimization add-on for Excel.
Analyze business situations to arrive at the "best answer" with this unique application. Best Answer manipulates data from your Excel worksheets, and uses linear programming techniques to help analyze the numbers.

Fourteen more worksheets and macros are also included:
Bi-Weekly Mortgage, Cellular Phone, Closing Costs, Increments, Loan Schedule, Mortgage Refinance, Interest Calculator, Point-To-Point, Fourier (shareware), MortAmt Macro (shareware), Print Macro, Regression Macro, Schwab (shareware) and Shortcuts.

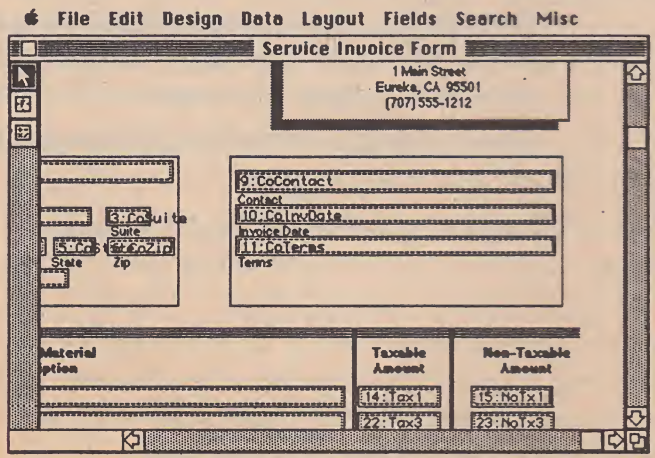
Home management

104 HomeWare Volume 1

Six programs to help make your home life more efficient... and more fun!

Home Inventory (shareware) – Maintain accurate records of your possessions.
Hopefully, you'll never need to replace household items like electronics, furniture, and appliances because of theft or damage, but if you do, accurate records will prove invaluable. This program maintains an inventory of your possessions, including purchase prices, serial numbers, and descriptions.

Form It! (shareware) – A powerful form management system for home or office.
With Form It!, you can make all your data entry tasks faster, easier, and more automated. It will turn any PICT or MacPaint image into a form, and then help you fill in the blanks, storing each record in a data file as you type! It can also print out each form on your ImageWriter or LaserWriter printer. Use it for invoices, party invitations, tax worksheets, certificates, or any time you need to add data to a form, drawing, or picture.



Form It! is the first shareware form management software. Use it to enter, maintain, and calculate data for invoices, certificates, or almost anything!

Household Shopper – Save time at the market with automated shopping lists.
You'll never forget that bottle of ketchup or roll of paper towels again! Mark the things you need from a built-in list of common items. You can also add your own items and categories. Then, print a list and go shopping. Household Shopper will even mark those items that you have coupons for!

This number is for orders only. For other information, please call (619) 942-2556.

Disk 104 (HomeWare) continued...

CK 2.1 (shareware) – A complete checkbook accounting system.
Get your checkbook organized with the help of this easy-to-use checkbook management program. A variety of reports can be generated and the program also includes functions to automatically reconcile the checkbook against a bank statement. Complete on-line help is built into the program.

MacAuto (demo) – A complete gas mileage and repair log for your automobiles.
Track your gas mileage, gas costs, repair costs, and more with MacAuto. Now, all we need is a portable Mac that we can take with us on the road! This demo version does not save or print. Information on ordering the complete version directly from the author is included within the demonstration program.

Mac's Bar (shareware) – Keep track of your favorite bar recipes.
Including over 100 recipes, you may never have to add any recipes to Mac's Bar. But if you do have some favorites, keeping track of them is a snap. Drinks can be located by drink name, or by a particular ingredient.

Education

105 Stars and Planets

Explore the mysteries of the universe, including a faster-than-light journey to the corners of the galaxy!

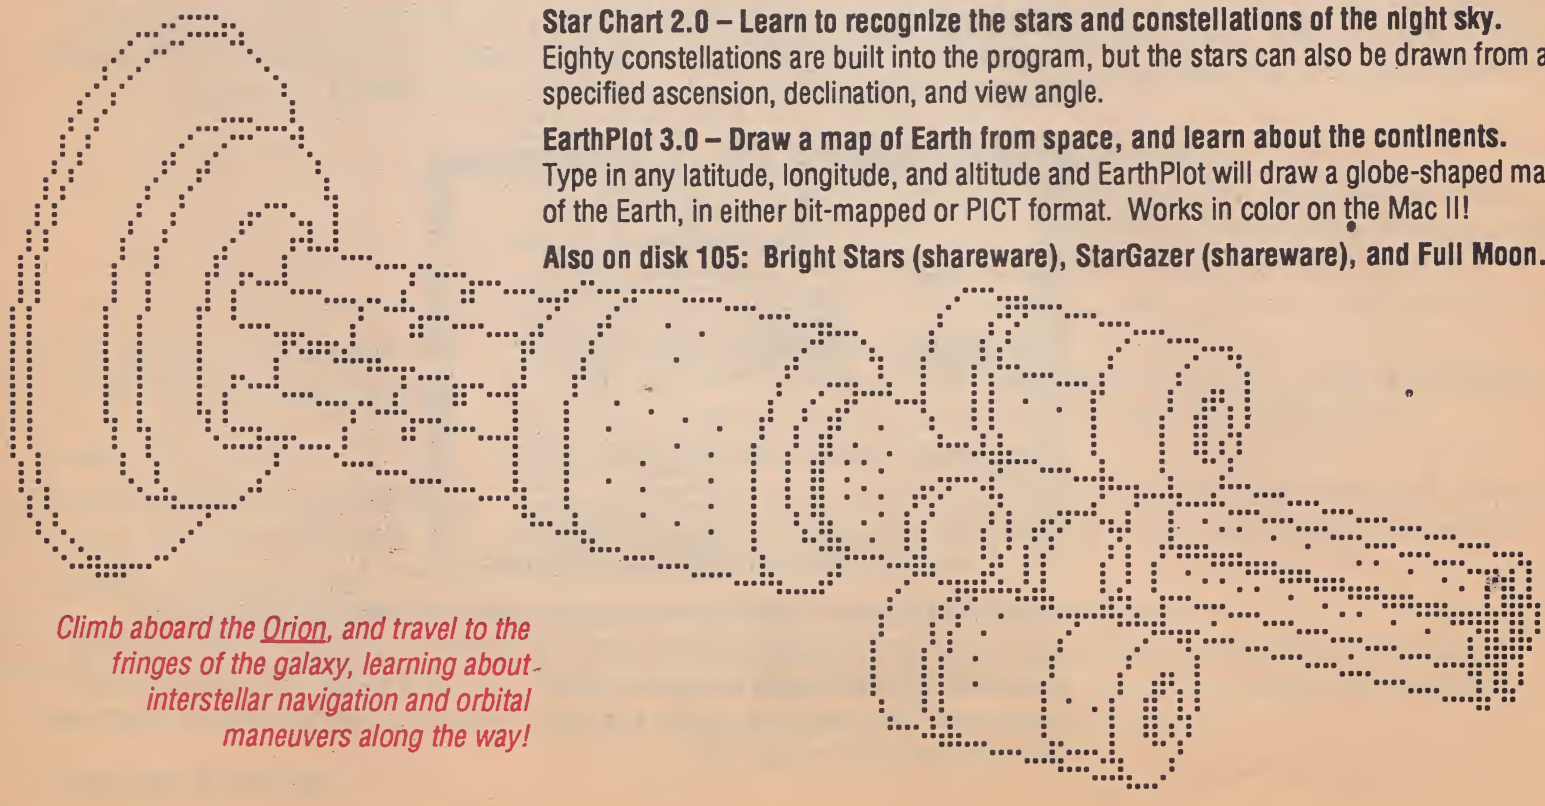
Gravitation 2.5 – The most fun you'll ever have learning about planetary interaction!
Learn about the force of gravity, and how the planets interact with each other. Includes 64 samples illustrating simple orbital motion, pulsars, planetary collisions, and more! Also included are **Orbit**, another planetary simulation, and **Planets 2.0**, a 3-D planetary simulator that works in color on the Mac II!

Orion 1.75 – Fly a spaceship and explore our solar system and nearby stars.
Climb behind the wheel of the Orion starship and reach speeds of several million times the speed of light! Learn about the planets and stars you pass. You can even try to achieve a stable orbit around the heavenly body of your choice!

Star Chart 2.0 – Learn to recognize the stars and constellations of the night sky.
Eighty constellations are built into the program, but the stars can also be drawn from any specified ascension, declination, and view angle.

EarthPlot 3.0 – Draw a map of Earth from space, and learn about the continents.
Type in any latitude, longitude, and altitude and EarthPlot will draw a globe-shaped map of the Earth, in either bit-mapped or PICT format. Works in color on the Mac II!

Also on disk 105: Bright Stars (shareware), StarGazer (shareware), and Full Moon.



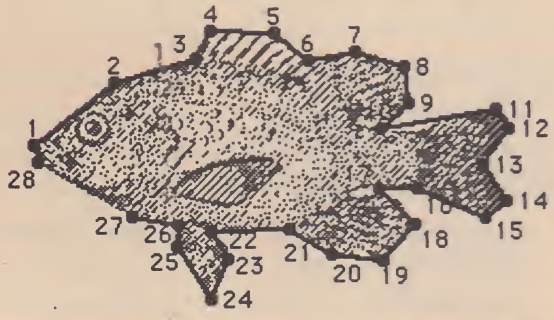
Climb aboard the Orion, and travel to the fringes of the galaxy, learning about interstellar navigation and orbital maneuvers along the way!

106 Preschool Programs

Six activity programs for the youngest Macintosh user. No reading skills are required.

With the Dot-to-Dot Construction Set, parents can create a variety of fun and educational puzzles. As the dots are connected, the picture will emerge!

Dot-to-Dot (shareware) – Help your child learn numbers, letters, and words.
Designed for ages 4 to 8, the Dot-to-Dot Construction Set combines elements of a child's dot-to-dot coloring book with a non-violent hangman game and picture puzzle. Parents can create new puzzles with any MacPaint-compatible drawing program.



Natalia's Dots (shareware) – A traditional dot-to-dot game with 26 puzzles.

Pattern Blocks (shareware) – A simple drawing program using geometric patterns.
Encourage creativity in your child with this simple drawing program. One of twelve different blocks can be dragged into the drawing area to create a picture. Parents can easily customize each of the blocks.

Kieran (demo) – A computer voice helps your child learn to read, count, and tell time.
This demonstration contains only a portion of the original program, but will give you an overview of the complete Kieran program.

Something's Hidden Here! – A picture recognition game for kids.
Click on one of the 38 puzzle buttons, and a picture will flash on the screen for an instant. As the child tries to guess what was in the picture, more and more of the image can be revealed by moving the 'decoder' (also known as a mouse!) across the image.

Halloween Night! (shareware) – Help young children overcome their Halloween fears!
Even the youngest children want to be a part of Halloween. This program helps your kids understand the holiday, with animated characters who come to the door for candy!

107 Beginning Math

Help develop their math skills early with these fun and educational programs for the beginning math student.

MacMath (demo) – A four-part program, including a high-speed math game!
A friendly alien guides your child through the math basics, first by teaching, then by testing the student. After all that hard work, an exciting outer-space game is included in which the student must shoot down the correct answer to each problem!

HeloMath (shareware) – Practice your math skills as you pilot a high-flying copter!
Fly across the mountains, blast the correct answers, and make it back to base in time!

Flashcard – A flashcard builder for repetitive-enforcement learning.
Children have learned with flashcards for years. Now, they can practice their skills on the computer! A set of multiplication cards is included, and parents can create their own.

Math Factory (demo) – A fun, flexible way to learn beginning math skills.
This program tracks a students day-to-day progress, and provides ten adjustable skill levels, to make sure the program grows as the students' skills increase. This demo version teaches only addition, but the complete program includes subtraction, multiplication, division, and fractions.

Hi! My dog Spot and I want to teach your children all about math! At our Math Factory, They'll have so much fun, they won't know they're learning!

Place your order today! Call (800) 842-5020
This number is for orders only. For other information, please call (619) 942-2556.

Games

108 Arcade Action Games

Nine exciting games that bring the arcade action home! Battle killer insects, rescue astronauts, and more!

These are just some of the situations you'll face, with these exciting games that recreate the video arcade experience on your Macintosh!

Centipede – Fight off an insect invasion in this Mac adaptation of the arcade classic!
Become the ultimate pest control service while you fight off deadly mutant centipedes, spiders, fleas, and other nasty creatures. The game includes great digital sound.

Continuum (shareware) – Explore 60 different worlds in your galactic gunship!
Pilot your ship through the solar wind while you blast laser cannons and pick up fuel. The game includes 60 different levels, each with a different map and layout. Plus, with the built-in editor, you can create your own worlds, and modify every game setting!

Iggy Iggopolis – Help Iggy conquer the void by laying down his special fences!
In this high-speed geometric challenge, based on the classic arcade game QIX, you'll have to fence off enough of the void to capture the deadly ZUUL.

Let's Get Tanked! – Go one-on-one with a computer controlled armored tank!

Lunar Lander – You'll need a steady hand to land safely on the lunar surface!
Choose your landing site carefully, because you'll need a steady hand to settle down safely on the uneven surface of the moon. This game does not work on the Mac II.

MacLanding (shareware) – Defend your astronauts from an alien kidnapping ring!
You'll have to keep moving to watch over an entire planet full of careless astronauts, who are being absconded by sneaky aliens as fast as you can rescue them!

MacMissiles (shareware) – A nuclear nightmare come true! Can you save the cities?
You are the controller of the S.D.I. (Star Wars) defense system in this classic missile defense game. How long can you protect six major cities from nuclear destruction?

Megaroids Plus – Battle your way out of the center of an asteroid belt!
You're caught in the middle of a dense asteroid field, with only your wits and your laser to blast your way out! This game does not work on the Mac II.

Spacestation Pheta (shareware) – Climb and jump your way out of the station!
This game will put your dexterity (and your strategy) to the test! Ten increasingly more difficult levels will challenge you, and when you register with the author, you'll receive a code that will "unlock" 70 additional levels for you to play! And, if that weren't enough, the game features a built-in editor, so you can create and play your own levels too!

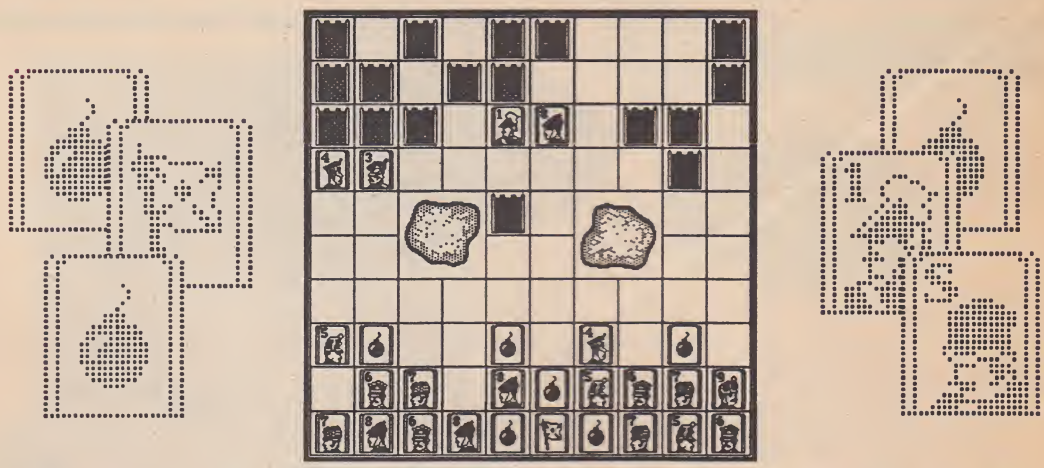
109 Puzzles and Strategy

Over thirty different puzzles and games that will put your strategic abilities to the test!

This Macintosh version of the classic Stratego game includes high-quality graphics and vibrant digital sound effects. Outwit the Mac and find his hidden flag!

Dragon (shareware) – Help save Bosnia from a ruthless fire-breathing dragon.

Stratego® – Find and capture the Mac's flag in this classic strategy board game! Use your marshals, scouts, spies, miners, and other soldiers to find and destroy the enemy flag. But be careful! Hidden bombs will throw you off the track, and destroy your men in the process! Stratego is a registered trademark of the Milton Bradley Company.



MacPuzzle – Fit each piece into the proper place, if you can! 25 puzzles are included.

BlobManager – Sixteen puzzles and games in one program! Yes, the name is strange, but the games and puzzles are great. Play Hangman, Magic Square, Fox-Goose-Grain, Fish Sticks, State Capitals, Coin Swap, and ten more.

MysteryBox (shareware) – Fire rays into the Mystery Box to find the hidden balls.

Enigma (shareware) – If you liked Rubik's cube, you'll love Enigma's locking rings.

PegPuzzlePak (shareware) – Four different puzzles in one! Can you solve them all? These classic puzzles are solved by jumping pegs over each other into empty holes.

Tablut – It's the Muscovites vs. the Swedes in this strategy board game for 2 players.

ThinkAhead Plus (shareware) – You'll need to think ahead to outwit your opponent. Move by choosing numbers on a board; each number subtracts from or adds to your score. Plan your moves carefully, and force your opponent's hand! For 1 or 2 players.

Also included: Towers of Hanoi, 2D and 3D Maze Games, and Hex Puzzle.

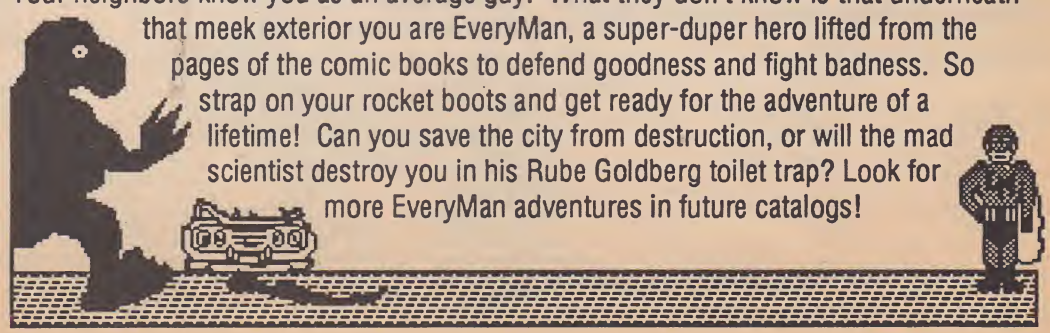
110 Adventure Games

Tired of shoot-em-up games? Put your brain to work with 2 "interactive novels" that make you the main character in an exciting adventure story!

Put on your tights and become EveryMan, protector of truth and justice, in this comic-book adventure. Can you stop the mad scientist and his evil Glob Monster?

The Village (shareware) – A medieval tale of mystic temples and ancient relics. Something's rotten in the village of Darmothe...the priests of the Stone Temple are up to no good and the villagers are helpless! Can you save the village (not to mention your own neck), or will you become another victim?

EveryMan Adventure #1 (shareware) – Go from mild-mannered to major muscle! Your neighbors know you as an average guy. What they don't know is that underneath that meek exterior you are EveryMan, a super-duper hero lifted from the pages of the comic books to defend goodness and fight badness. So strap on your rocket boots and get ready for the adventure of a lifetime! Can you save the city from destruction, or will the mad scientist destroy you in his Rube Goldberg toilet trap? Look for more EveryMan adventures in future catalogs!



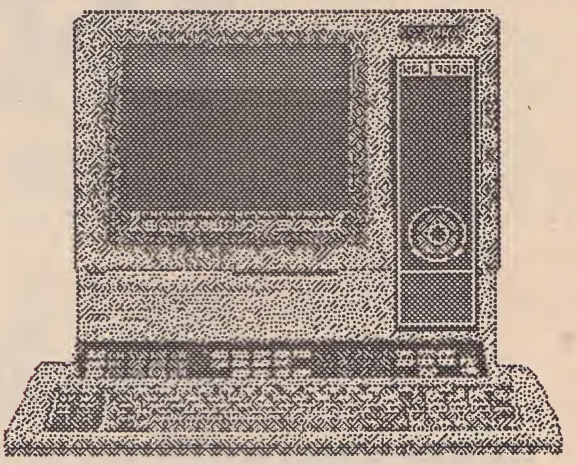
Place your order today! Call (800) 842-5020
This number is for orders only. For other information, please call (619) 942-2556.

111 The Phoenix – Disk One

If you liked the movies 2001 and 2010, you'll love this game!

The Phoenix – Return to the Discovery in the year 2066 for a little sci-fi sleuthing. Based on the hit science fiction movies 2001 and 2010, this game features an abundance of digitized scenes and sound effects from the films. For the best results, you'll also want to order disk 112 (below), which contains a huge add-on sound file that provides the voice of the treacherous HAL9000 computer system.

Also included: Colossal Cave Adventure (shareware) and Strange Hotel (shareware).



Climb aboard the disabled Discovery and attempt to reactivate HAL9000 in The Phoenix, an adventure based on the hit movies 2001 and 2010.

112 The Phoenix – Disk Two

This companion to disk 111 contains a huge add-on sound file for The Phoenix, and 2 other bonus games!

HAL Files – A companion sound file for The Phoenix adventure game. This file is not required to play The Phoenix (disk 111), but will greatly enhance the game. Place this file in the same folder as the game itself, and the pesky HAL9000 computer will come to life, speaking to you as you play!

The Journey (shareware) – Repair your ship and blast off in this text adventure.

The Venice Project (shareware) – Hack into a mainframe and prevent disaster! In this unique game, you are a young computer "hacker" attempting to break into a large mainframe computer system. But your intentions are good...the world is doomed unless you can defuse the situation through the mainframe.

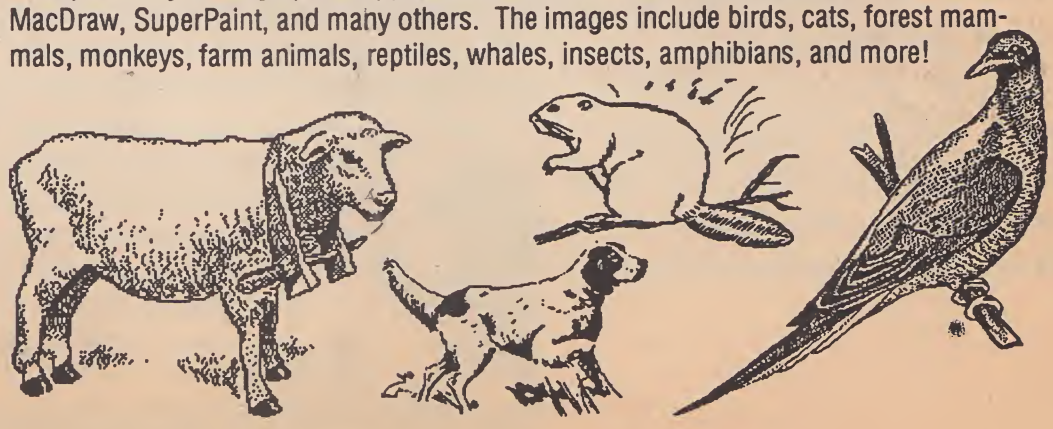
Clip Art Graphics

113 Animal Clip Art Volume 1

Spice up your newsletters, pamphlets, and publications with 52 different images from the animal kingdom.

You never know when you'll need a picture of a bullfrog or giant sloth to add life to a newsletter, flyer, or other publication.

This disk contains a collection of bit-mapped images that can be easily incorporated into almost any publication. The pictures are stored as MacPaint files, which can be opened or imported by most graphics applications, such as PageMaker, Ready-Set-Go, MacDraw, SuperPaint, and many others. The images include birds, cats, forest mammals, monkeys, farm animals, reptiles, whales, insects, amphibians, and more!

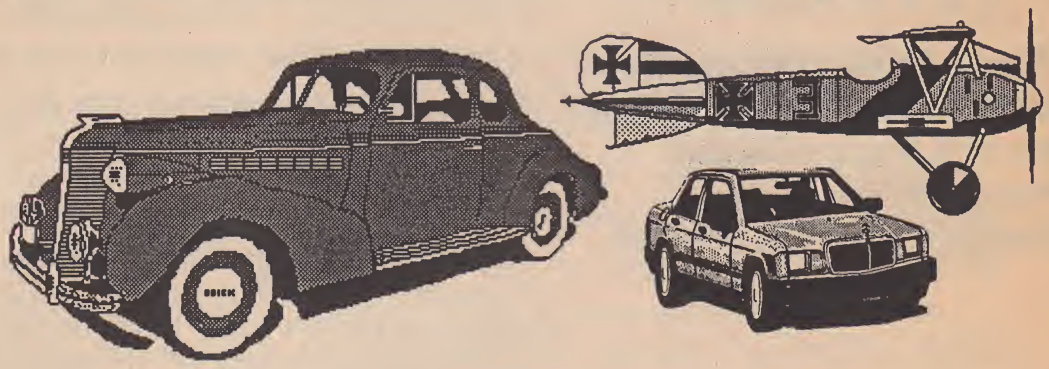


114 Planes, Trains, & Automobiles

Add these images to your flyers, posters, and other desktop publishing projects.

This disk is filled with excellent hand-drawn and digitized images in a variety of sizes. you'll find both classic and modern cars, airplanes, boats, and other vehicles.

This disk includes over 75 images of cars, trains, airplanes and motorcycles. A number of auto manufacturer and railway logos are also included, as well as a "construction set" of drawings that assist you in drawing '64-'68 model year Mustangs yourself. All images are in bit-mapped MacPaint format for use in a wide variety of drawing programs.



115 Misc. Clip Art Volume 1

100 different images, including holiday pictures, foods, famous places, and more!

On disk 115, you'll find a wide selection of quality digitized and hand-drawn images to add character to almost any project.

The pictures on this disk don't fall into one specific category, but cover a range of topics and are drawn in both realistic and cartoon styles. Most pictures are samples from commercially available clip art collections, and contain information for ordering more images directly from their creators. All images are in bit-mapped MacPaint format.

116 Laser Art Volume 1

LaserWriter art that prints at the highest quality, even after stretching and resizing!

These are just a few of the high-resolution images you'll receive on disk 116. Since the images are in Encapsulated Postscript format, they can be scaled, rotated, and stretched without distortion.

The artwork on this disk requires a LaserWriter or other postscript-compatible printer. The art can be used with any desktop publishing program that can use the Encapsulated Postscript Format (EPSF), such as PageMaker, Ready-Set-Go, Quark Xpress, and others. The images can also be opened by Adobe Illustrator, or imported into Aldus Freehand, for further editing and modification.

Place your order today! Call (800) 842-5020
This number is for orders only. For other information, please call (619) 942-2556.

ImageWriter Fonts

117 Near LQ Fonts Volume 1

Three fonts that produce near letter quality output on any ImageWriter, ImageWriter II or ImageWriter LQ printer.

Alexis – Includes serif and sans serif versions, and a variety of bullets and symbols. Designed by a professional printer, Alexis is one of the most legible fonts available. It includes light and medium faces, point sizes from 8 to 48, rules, boxes and other special characters.

Beverly Hills (shareware) – One of the all-time classic high quality serif fonts. The Beverly Hills font family was designed to be a formal, highly readable font that doesn't look computerized. It comes in 9-48 point, and is one of the most popular fonts ever.

Palencia (shareware) – A hot serif font from Andrew Welch, "Mr. Shareware!" Besides beautiful print quality, Palencia includes a unique integrated instruction manual that offers tips on using the font to its full potential. Character reference charts are also included. You'll love it!

118 Near LQ Fonts Volume 2

Three high-quality fonts for your ImageWriter. Get both disks 117 and 118 for a complete set!

Alderney (shareware) – Another quality font from Andrew Welch, creator of Palencia. Alderney is a beautiful sans serif font that comes in 9 to 48 point sizes. Though it is perfectly usable alone, pair it with Palencia, from disk 117, and you'll have two of the best fonts ever produced for the ImageWriter.

Clairvaux (shareware) – A serif font with elements of Palatino & PostMedieval Light. Clairvaux comes in ten different sizes from 9 to 48 point, and also includes ClairvauxCaps, a special-purpose font for creating initial caps. It is a dense and angled font, with straight serifs, and looks great on screen and on paper.

Neshota (shareware) – This sans serif font will become one of your favorites! Neshota is one of the largest font families available anywhere! It comes in a whopping 22 different sizes, from 8 to 72 point. Because so many sizes are included, it will work well with the ImageWriter LQ's triple-quality mode.

119 Display Fonts Volume 1

This disk contains 56 ImageWriter fonts in large sizes, perfect for headlines, letterheads, and posters.

On this disk you'll find 56 individual fonts, in a variety of sizes, for any ImageWriter printer. They are typically large and stylized, perfect for posters, headlines, flyers, and other special-purpose uses. The fonts are free, with no shareware fees required.

These are just some of the fonts from disk 119. They can add a special touch of personality to all your publications.

LaserWriter Fonts

120 LaserFonts Volume 1

Eleven quality downloadable fonts for the LaserWriter and other postscript-compatible printers.

Alison – An elegant font perfect for invitations, awards, and other formal purposes.
Alison ABCDEFGH abcdefgh 123456 !@%&

D. Ross Font Demos (shareware) – Sample versions of three oustanding fonts.
These three font samples are missing some vowels, but we think you'll like them enough to pay the shareware fee and receive the complete versions from the author.
ARCHITECT SAMPLE DRAFTSMAN DEMO SKETCH abc 123

Bill's Dingbats (shareware) – An extensive collection of arrows, bullets and symbols.

Canaith (shareware) – A striking text or display font with an Arabian influence.
Canaith Canaith Canaith ABCDEF abcdef 1234567 !@$%&

ChiTown – This typeface resembles the standard Chicago font.
ChiTown ABCDEFGHIJKLMNOP abcdefghijklmnop 1234 !@&

Helvetica Fractions (shareware) – Fraction symbols with horizontal separators.
Create custom fractions! 111/123 111/456 111/789 223/234 252/567 320/891 453/987 440/753

OCR – An Optical Character Recognition font developed for the U.S. Navy.
This font mimics the standard IBM type ball used in many military applications.
OPTICAL CHARACTER RECOG ABCDEFGHIJK 12345 $%&{}J

Rodchenko (shareware) – A bold sans serif face perfect for posters, mastheads, etc.
Rodchenko Rodchenko Rodchenko 12345 !$%&

Sans Serif (shareware) – A multi-purpose font that's great for body copy or headlines.
Sans Serif ABCDEFG abcdefg 12345 !@$&

121 LaserFonts Volume 2

Ten more downloadable PostScript fonts for your LaserWriter printer.

CuneiFont (shareware) – A bizarre display font with a new-wave pop appeal.
CUNEIFONT ABCDEFGH abcdefgh 123456 !@$%&

Flintstone (shareware) – A stone-age display font that looks great shadowed.
FLINTSTONE FLINTSTONE 1234567 1234567

Kathlita (shareware) – An unusual face with both formal and informal characteristics!
Kathlita ABCDEFGHIJKLMNOPQR abcdefghijklmnopqr 12345 !@$%&

Louisville (demo) – Similar to the classic Los Angeles font. Missing the "b" and "j".
Louisville ACDEFGHIKLMOPRST abcdefghiklmnopqrst 12345

ModernPrint Bold (shareware) – A narrow font that resembles fine hand printing.
ModernPrint Bold ABCDEFGHIJKLMNOPQ abcdefghijklmnopq 12345 !@$%&

Thomas – A classic serif font based on Caxton, with bold strokes and a stately look.
Thomas ABCDEFGHIJKLMNOP abcdefghijklmnop 123456 !@$%&

Trondheim (shareware) – If you need some Nordic runes, this font's your only hope!
ᚢᛃᚹᛞᛟᚠᛈᚳᚦᛒᛉᛜᛊ ᚢᛃᚹᛞᛟᚠᛈᚳᚦᛒᛉᛜᛊ

Also included: Chester, IBM Klone, **and Chicago Symbols** ⌘✓◆.

Disk descriptions continued on page 19...

Place your order today! Call (800) 842-5020
This number is for orders only. For other information, please call (619) 942-2556.

How to order

Placing your order

The easiest way to place your order is by telephone. Call us toll-free at (800) 842-5020, and have your disk numbers and credit card information ready for our operators. If you prefer, you can also place your order by mail. Tear out or photocopy the order form on the next page, and mail it to: Somak Software, 535 Encinitas Boulevard, Suite 113, Encinitas, California 92024.

Business hours

Somak Software is open from 8:00 AM PST to 5:00 PM PST Monday through Friday, and from 10:00 AM PST to 4:00 PM on Saturday. Our technical support staff is available Monday through Friday only.

Payment methods

Orders placed through the mail must include payment with Visa, Mastercard, personal or company check, money order, or bank draft. Telephone orders must be paid by Visa or Mastercard. A minimum purchase of $20 is required for credit card orders. Written purchase orders will be accepted from major institutions such as universities and major corporations. California customers please add the correct sales tax for your county (6.5% or 7%). Foreign orders must be paid by Visa, Mastercard, international money order, or a check in U.S. dollars drawn on a U.S. bank. No C.O.D. orders will be accepted.

Shipping

Please allow one to two weeks for delivery. Orders within the continental United States and Canada pay $4.00 postage and handling. Foreign orders please add 15% of the total order amount to the standard $4.00 charge. Federal Express service is available on most orders placed by telephone. Please call for details, delivery schedules and pricing.

Returns and exchanges

Somak Software warrants that programs will perform as described and are compatible with specified Macintosh configurations. If a disk does not perform as described, we will exchange that disk for another one of your choice. Defective disks, disks damaged in shipping, and disks duplicated incorrectly will be replaced with the same title. No refunds will be issued for software products.

Service charges

A service charge is paid for each disk ordered. This service charge covers Somak Software's costs for research, organization, duplication, advertising, technical support, and other related expenses. This charge does not release the purchaser from any shareware fees requested by a program author (see page five). Please pay the shareware fees requested for any shareware programs that you keep and use. This will insure that the shareware distribution system remains a viable marketing alternative.

Copyrights

The compilations and collective contents, and other proprietary software and instructional materials contained on each disk are copyrighted by Somak Software. Any other copyrights claimed on any other program or data file are retained by the respective copyright holder. Somak Software's disk compilations may not be duplicated except for personal archival purposes.

SOMAK SOFTWARE, INC. ◇ 535 Encinitas Boulevard, Suite 113
Encinitas, California 92024 ◇ Telephone 619/942-2556

Order form

1. Select your disks

Please circle the disk number of each disk you would like to order below.
Disks start at $8.99 each, with discounts available for multiple-disk orders. Count the total number of disks in your order, and use the table at the left to determine your price per disk. For example, 3 disks would cost $8.99 each, and 20 disks $7.99 each.

Qty.	Price Ea.
1-5	$8.99
6-15	$8.49
16-25	$7.99
26 up	$7.49

101	106	111	116	121	126	131	136	141	146
102	107	112	117	122	127	132	137	142	147
103	108	113	118	123	128	133	138	143	148
104	109	114	119	124	129	134	139	144	149
105	110	115	120	125	130	135	140	145	150

2. Calculate your subtotal

Multiply the total number of disks you selected by the price per disk you looked up with the pricing table above, and write your numbers below. For example, if you selected 2 disks, multiply 2 times $8.99. Your subtotal would be $17.98. If you selected 10 disks, multiply 10 times $8.49. Your subtotal would be $84.90.

Number of disks _____ X price ea. _____ = Subtotal $_____

3. Splashes?

If you would like to order either of the *Splashes* clip art packages described on page 18, please indicate which ones you want by checking off the boxes below. Each *Splashes* package contains three disks of quality art, and sells for $39.95.

❑ **Yes, I'd like _____ Splashes #1 – Assorted Art @ $39.95 each.**

❑ **Yes, I'd like _____ Splashes #2 – "Top Gun" @ 39.95 each.**

4. Add it up!

Subtotal from section 2 above .....$ _____

Splashes subtotal from section 3 .....$ _____

Sales tax (CA residents only, add 6.5% or 7%) .....$ _____

Postage and handling.....$ 4.00

Foreign postage charges (if any) .....$ _____

GRAND TOTAL .....$ _____

Software developers! Somak Software want's you!

If you're a Macintosh programmer, and are interested in having a piece of software you've already written or a new project you're working on marketed commercially, we're interested too. Or, if you would just like your public domain or shareware software added to our next catalog, let us know.

We reach over 500,000 Macintosh customers annually, in the United States and worldwide. Your product will receive the maximum possible exposure.

If you are interested in having Somak Software market your products, please call us at (619) 942-2556 and ask for Robert.

Sincerely,

Robert Eberhardt
President

Utility software

122 Startup INIT Utilities

22 programs that add power and function to every session in front of your Macintosh!

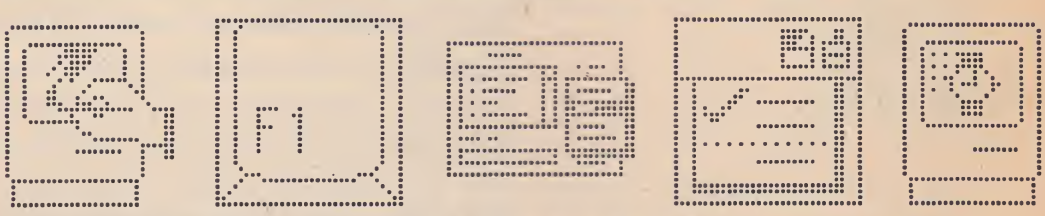
Place an INIT utility into your System Folder, and each time you turn on your Mac an icon will be displayed to let you know that the utility is being installed.

AutoIdle – An automatic screen saver utility that prolongs the life of your monitor. After long periods of inactivity, your screen may develop "burn-in," or a retention of screen images. This utility will automatically blank your screen after a specified period of inactivity, and prolong the life of your screen!

Backdrop – Kick the gray habit! Use any MacPaint picture as a background pattern. Three samples are included. Backdrop does not work on the Macintosh II.

BigScreen (shareware) – A simulated big screen display for MacPlus owners. This turns your screen into a "window" on a larger page area, simulating the performance of a big-screen Mac. BigScreen does not work on the Mac SE or Mac II.

Curly Quotes – Two different programs that provide printers' quotes as you type. Straight quotation marks are easy to type, but don't look as good as the curly marks when printed. These programs will make the switch for you automatically.



F1-F4 (shareware) – Make your extended keyboard do what it was meant to do! If you have the extended keyboard with function keys, this will make the first four (F1-F4) actually perform the functions they are labeled for (undo, cut, copy and paste).

Fontsie (shareware) – Use fonts on the fly any time you want, without installing them! If you use certain fonts infrequently, why should you have to install them? Well, with Fontsie you don't! Keep those fonts in a special folder, and any time you need them, they can be temporarily installed by pressing the Caps Lock key while a program opens.

MFMenu Plus – Use MultiFinder? You'll love this! Switch between programs easily. Do you find yourself dragging down to the bottom of your Apple menu constantly to switch between programs in MultiFinder? MFMenuPlus creates a pop-up menu with a list of your open applications, and also serves as a demo for OnCue™.

SelText – Patches the dialog box routines to automatically select a default text item.

SFVol (shareware) – Select volumes directly, and create new folders instantly! This one is hot! Instead of clicking the Drive button repeatedly to select the disk you want to work with, use SFVol's pop-up menu to select that disk directly! New folders can be created, and the amount of free space is displayed in all Open and Save dialogs.

TattleTale (shareware) – This one keeps tabs on your other INITs & logs their activity!

Welcome2 – Turn on your Mac, and it will greet you with a spoken message.

PopIt! and PopUp (shareware) – Select any menu item from anywhere on the screen!

INIT Manager Demo – Let's you keep your INITs in any folder and log their activity. This demo doesn't actually do anything, but explains in detail how INIT Manager can make dealing with a lot of INIT utilities much easier. The actual program lets you keep your INIT utilities in separate folders, and also keep a log file of their activity.

Seven more INIT utilities are also included: Insure, MacWait, AutoCursor, Reverse Screen, CrashSaver, Enchanted Menus, and CursorWrap.

Place your order today! Call (800) 842-5020
This number is for orders only. For other information, please call (619) 942-2556.

123 Control Panel CDEV Utilities

These great utilities are configurable from your control panel desk accessory.

ApFont (shareware) – Choose the default font that will be used by your applications.

ApplicationMenu – Switch between programs in MultiFinder from a pop-up menu.

Fortune – A fortune, quote, or joke will greet you each time you start up your Mac! Turning your Mac on will be a new, fresh experience every day with Fortune! One of hundreds of different quotes, jokes, sayings, and fortunes will be randomly selected and displayed each time you power up, or just once each day.

Front & Center (shareware) – The ultimate utility for the truly lazy mouse operator. This one causes all dialog and alert boxes to be centered over wherever your mouse cursor is at the moment. This can save you a lot of time, especially with a big-screen.

Møire – A fully configurable screen saver that draws beautiful animated patterns.

Port~Master – View and change the default settings of your serial ports.

SCSI Parker (shareware) – Automatically parks hard disk drives when you shut down. If your hard disk requires you to run a special program to park the heads, then you need SCSI Parker It will park the heads when you select Shut Down from the Finder.

SCSI Tools (shareware) – View the IDs of all SCSI devices, mount any off-line drives!

SuperClock – A time and date display that doesn't get in the way of your other work. It's a bird... It's a plane... no, it's just the greatest menu bar clock utility of all time, SuperClock! It will display the time in the upper right corner of your menu bar, and is completely adjustable. You can even choose what font/style to display the clock with!

Who's Who – Find out just what that Macintosh of yours has under the hood. This displays 10 different pieces of info about your Mac configuration: System version, processor, QuickDraw type, keyboard type, AppleTalk driver version, and more.

Two CDEVs for the Mac II are also included: ScreenMaster (shareware), and Toggle-Cache. See page 30 for descriptions of these two utilities.

124 Virus Fighters and Vaccines

Protect your valuable data from destructive computer viruses and "Trojan Horse" programs!

It was bound to happen sooner or later. In 1988 the first Macintosh computer virus was unleashed on the world. The "Peace Virus" turned out to be relatively harmless, but was followed by Scores, nVir, and a host of others with malevolent intentions. This disk includes informational files and utility programs designed to educate you about computer viruses and help you protect your data from contamination. You'll receive:

Vaccine – This CDEV from CE Software prevents unauthorized changes to your files.

GuardDog (shareware) – Protect your files from being renamed, moved, or copied.

Interferon (shareware) – Searches for multiple virus types and blows them away!

Virus Detective (shareware) – A desk accessory to scan for infection and remove it.

Also included are Ferret, Virus Rx (©Apple), Agar, and VCheck .

125 StuffIt and StuffIt Utilities

The most powerful data compression utility ever, plus some great stuff to go with it!

StuffIt (shareware) – The industry standard for data compression and transmission. Do you have files and programs you use very infrequently, but can't bear to throw away? Well, with StuffIt you can reclaim up to 90% of that used disk space, and not lose a thing! It can compress any file, making it occupy as little as 10% of the original space on disk. Passwords and DES encryption can also be added for data security.

StuffIt Utilities (shareware) – A collection of companion utilities and accessories. Includes UnStuffIt, AutoUnStuffIt Shell, two "DAs", and the SFVol Init (see page 19).

StuffIt Cataloger (shareware) – A HyperCard stack to catalog your StuffIt archives. This stack will "look" into any StuffIt archive and create a directory of the contents.

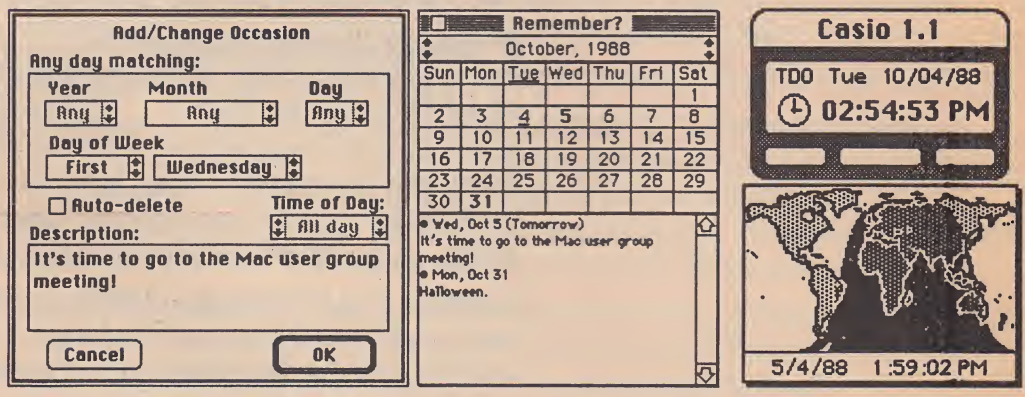
Desk Accessories

126 Desk Accessories Volume 1

Desk accessories are installed and listed beneath your Apple menu. Use them any time!

With the Remember DA, you'll never miss another appointment! The Casio clock DA features 9 time zones, 10 alarms, and 10 timers! The SunClock DA creates a world map showing where the sun is shining! Our SunClock demo is limited to one time zone.

Remember (shareware) – The ultimate personal secretary who never forgets!
Do you have trouble remembering appointments, birthdays, and other occasions? You won't any more, if you have Remember! Enter descriptions of important occasions, and this combination desk accessory/INIT utility will automatically remind you of impending events when you turn on or reset your Mac! Occasions can be one-time events, like dentist appointments, or periodic, like birthdays and anniversaries. You'll love it!



Calculators – Eight calculators for scientific, financial, and other specialty uses.
Included are the dCad Scientific (shareware), the RPN-C calculator, a Feet/ Inches/ Fractions computer (shareware), an abacus, a Roman numeral calculator, and 3 more!

Convert (shareware) – The ultimate Metric-to-English and back again convertor!
Not only will Convert move numbers from the English system to Metric, but it also does unit conversions in linear, square or cubic measurements, supports all standard multiples and submultiples (deca-, milli-, etc.), and is even a four-function calculator!

Unit Conversions (shareware) – Unit conversions for area, acceleration, mass, etc.

Note Pad II (shareware) – A great note-pad replacement with pop-up topic index.
When you need to jot something down, do you still reach for a scrap of paper? Well, you won't if you have Note Pad II installed on your Mac! It provides a multi-page scratch pad, and has an innovative pop-up menu that keeps your notes categorized.

New Scrapbook (shareware) – Store your pictures and text with greater flexibility.
This text and graphics scrapbook functions much like the original one, except that specific portions of any text or graphic pasted into it can be copied separately. Large pictures can be reduced to fit inside the scrapbook window without distorting the image, and long text entries can be scrolled to view areas that are outside of the main window.

Clocks – The time can be fun with these wild, wacky and useful replacement clocks!
You'll receive eight new clock accessories to replace the old alarm clock. Choose from Casio (shareware), which features nine programmable time zones, ten countdown timers, ten elapsed timers, and ten nameable alarms, a reproduction of London's Big Ben, the infamous "Two Sheds" Jackson clock, and five more!

Sunrise...Sunset – Displays the sunrise and sunset times for any location.
Enter your latitude and longitude, and this DA will display an accurate sunrise and sunset time for either your standard time or daylight savings time.

SunClock (demo) – A fascinating display of the relationship between Earth and Sun.
SunClock draws an accurate world map showing the areas of light and darkness.

Place your order today! Call (800) 842-5020
This number is for orders only. For other information, please call (619) 942-2556.

127 Graphics Desk Accessories

A collection of outstanding accessories for drawing, painting, and other graphic work.

Scribbler 3.0 (shareware) – A full-featured object oriented drawing program in a DA!
If you need to scratch out a quick illustration, or touch up a picture before pasting it into another program, you'll find Scribbler handy indeed!

DAfx 1.31 (Keyware) – A powerful painting program that you can use any time!
This is one of the most full-featured paint programs around, with almost all of the tools that MacPaint had, and some of the special features of newer programs like FullPaint and SuperPaint! And to top that all off, because it's a desk accessory, you can use it any time you want, without quitting your current program. Some of the features of DAfx are disabled until you register with the program's author. You will then receive a software "key" that will unlock your copy of DAfx and make it fully functional.

DAfx is a painting desk accessory with most of the features of MacPaint, and some unique tools of it's own for special effects.

Artisto Plus (shareware) – Open, view, and copy any MacPaint or PICT image.
You'll like the quick and easy operation when you use Artisto Plus to open paint or PICT images, preview them, and paste all or part of those images into another document.

SuperRuler 1.1 (shareware) – Measure on-screen images for precision alignment.
You probably wish all programs had rulers the way MacWrite and PageMaker do. Well, now they can! The SuperRuler can be flipped for horizontal or vertical measuring.

With SuperRuler, you can overlay a ruler on top of any on-screen document for precise alignment and measurement.

AppleDraw (shareware) – A mini MacDraw, accessible within your other programs!

Show DA (demo) – This DA will open MacPaint images and create a slide show!
The Show accessory will open MacPaint pictures, and flip through them automatically in a "slide show." This demo is missing some features, such as time delay, but is useful on its own. Information is included for ordering the complete version from the author.

Bezier – This painting accessory is a specialist in smooth Bezier curves!
With multiple ink modes and a special Bezier tool, you can produce professional curves in no time at all! Use Bezier in conjunction with another program or the scrapbook, and you can copy and paste the curve directly into another document.

128 Text Editing Accessories

Sometimes you don't need all the features of a word processor. Use one of these great editors!

McSink 6.2a (shareware) – Everything but the sink is in this amazing text tweaker!
It started as a humble utility with character stripping and word counting capabilities. Now, it's one of the most feature-packed programs in existence! It also serves as a demonstration of it's commercially-available big brother, Vantage™. McSink can edit the contents of your clipboard, add and remove prefix and suffix strings to every line of text, sort text three different ways, change spaces to tabs and back again, strip control characters such as linefeeds from your text, edit multiple documents, add or remove line numbers, and much, much more! You'll find yourself using it every day!

McSink features an innovative icon bar that offers an alternative to it's pull-down menus. All the functions are quickly and easily accessible from these icons.

continued on next page...

Disk 128 (Text Editing Acc's) continued...

MiniWriter (shareware) – This text editor is optimized for the ImageWriter owner. If you need to quickly edit a text-only document, and print it out on your ImageWriter, you'll like MiniWriter. It comes with a special font that mimics the draft printing characters of your ImageWriter, for 100% WYSIWYG operation. And if you own a LaserWriter, you can use MiniWriter to send Postscript commands to your printer!

SigmaEdit – This text-only editor works with documents larger than 32K!

MyWord (shareware) – Is it a text editor or a word processor? Well, a little of both... Most text editing accessories allow you to select a font for the entire document to be displayed in. MyWord lets you specify individual fonts, styles, and sizes for every character! And, it uses familiar on-screen rulers for margin settings.

Word Counters – Three accessories to count the number of words in your text files.

Afterthought (demo) – A disk-based editor designed for the power programmer! This desk accessory editor is modeled after MDS Edit, the standard in text editing since the early days of the Mac. Since it is disk based, it can edit documents as long as 8,000,000 characters, and can open two files simultaneously. This demo version can't save or print your files, but includes ordering information for the complete package.

PowerEdit (shareware) – Another editor designed for the C or Pascal programmer. PowerEdit includes features that programmers will love, like block shifts, search and replace, auto indentation, automatic save, and even bracket matching!

JoliWrite (shareware) – Beautify your files before transmitting them with a modem. Some communications services need files to include a carriage return at the end of each line, and need spaces instead of tab characters within the text. JoliWrite automatically does most of this formatting for you before you upload your text to another system.

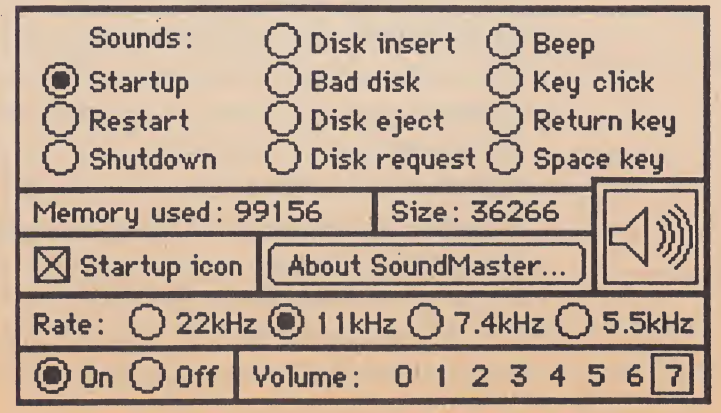
Sound effects

129 SoundMaster Volume 1

With these incredible digital sound effects, your Mac will take on a whole new personality!

SoundMaster (shareware) is a small utility that you place inside your System Folder. It will play sound effects during specific Mac operations, such as inserting a disk or shutting down. Think of your co-workers amazement when your Mac greets you in a human voice and asks what you would like to work on! Or, create a high-tech environment with our robotic effects that make your Macintosh sound like a deadly killer android! We've included five different sound "environments" for you to choose from.

NOTE: Digital sound effects can use substantial amounts of memory. This disk will work on Macs with the standard one megabyte of RAM, but will work more efficiently if your Macintosh has two or more megabytes installed.



The SoundMaster control panel lets you select different sound effects to accompany eleven different Mac operations.

Place your order today! Call (800) 842-5020
This number is for orders only. For other information, please call (619) 942-2556.

HyperCard Stacks

The programs in this section require the HyperCard application from Apple.

130 Utility Stacks Volume 1

Do you use Apple's HyperCard to create your own stacks? You'll love these external functions and script examples!

Are you tired of the standard button shapes that came with HyperCard? The Acme Dot Company has produced two sets of "Clicky Buttons" that move when you push them!

About XCMD – Now your stacks can have a custom "About this stack..." menu.
Most Macintosh programs include a credit line under the Apple menu. Now your HyperCard stacks can too! This external command adds one or two lines under the menu that you can link into any card or script.

FileName – Access the standard file dialog routines from your HyperTalk scripts.
Nobody likes to type in pathnames like "HardDisk:HyperCard:My Stacks:Test1" when they can just point and click! Well, this external function lets your stacks use the standard file dialog boxes for opening and saving files.

Clicky Buttons – Seventeen whimsical animated buttons to add life to your stacks.
The wizards at the Acme Dot Co. have come up with a collection of buttons that move when you click them, in a variety of visually interesting ways. Use them in your stacks, and you'll achieve a unique look and feel that everyone will enjoy.

PopAlert (shareware) – Access the standard alert dialog boxes with their icons.

ResCopy – If you use XCMDs, XFCNs, or any other resources, you need ResCopy!
This external command, which is copyrighted by Apple, is one of the most useful HyperCard utilities ever created. It facilitates the movement of resources to and from any stack, with commands to copy, rename, renumber, and remove resources. It can also play sounds and display icons and cursors. You'll never want to be without it!

DragRect – Create "draggable" windows with this external function.

StackEditor Demo – Edit scripts from different objects or stacks simultaneously!
HyperCard's standard script editing environment is somewhat restrictive, since you can't easily edit scripts from a number of different objects. Cutting and pasting between scripts can be a real chore, too. With the StackEditor, your scripts from stacks, fields, buttons, cards, and backgrounds are all accessible with a scrolling field.

ZoomRect – This XCMD animates a zooming rectangle to provide visual cues.

ZipCheck – An XFCN to check the validity of 5- and 9-digit zip codes.
Enter a zip code, and ZipCheck will return the two-letter state abbreviation if it's valid.

Menu XCMDs – Add standard pull-down and pop-up menus to your stacks!
We've collected five of the best HyperCard menu bar utilities available, and put them together on one disk. Now you can create standard pull-down menus, pop-up menus, hierarchical pop-ups and pull-downs, and even a pop-up menu bar (this function is a shareware item). With all these routines, you'll never need another one!

Windoid – Six newsletter stacks packed with helpful info, scripts, and ideas.
These stacks, transcripts of the first six newsletters from Apple's HyperCard User Group, include some of the best utilities available for streamlining your stacks and making them more functional and efficient. Find out how to group and move buttons and fields, create "sticky buttons," import text files, and much more!

131 Utility Stacks Volume 2

This disk is filled with 33 external commands, functions, and scripts to enhance your stacks.

BarButton – An innovative and flexible control button similar to a scroll bar. Sometimes you need a variable control, but a scroll bar just isn't right. When you move the mouse over a BarButton, a black area in the button will move with the mouse to indicate a selection. BarButtons can be placed horizontally or vertically.

ChangeCursor – This XCMD will change the cursor independent of any handler. HyperTalk's commands to change the cursor work only within one handler. This XCMD lets you change the cursor on the fly, and it will stay that way until you change it again.

Clipboard – This pair of XCMDs will send and receive text to and from the clipboard.

Crunch – An XFCN that removes extra spaces between the lines of a text field.

DispPict – Display paint pictures, PICT images, or color images with HyperCard. This external command will open a graphic image, either from a separate file, or from a PICT resource stored within your stack, and display it over the top of the current card. On a Mac II, the image can be displayed in color.

FormatNumber – This will format numbers by adding commas and decimal point.

FormatPhoneNumber – Converts 7 or 10 digit numbers to phone number format. This will automatically convert a "raw" number like 6199422556 to (619) 942-2556.

Highlight – Automatically highlight any button as the mouse passes over it! This stack was designed to help computer neophytes grasp the concept that buttons are meant to be clicked on to initiate actions. Buttons can automatically and selectively be highlighted when the mouse cursor is pointing to them.

Mac II Stacks – Three stacks to control color and 68020 data cache on the Mac II.

HyperTools – A collection of eight different external commands and functions. This stack includes 8 functions: **StripIt** returns the width of a string in pixels. **ZoomRect** will create a zooming rectangle from one point to another. **DragRect** simulates a moving window outline as you drag a field. **CopyBits** will copy any bit image from one point to another, scaling it if necessary. **RGB Backcolor** and **RGBForecolor** will set the background and drawing colors on a Mac II. **GetPicture** can retrieve and draw PICT images, and **ListCatalog** will read the contents of a disk or folder into a field, showing each file name, it's size, and it's type and creator information.

PaintView (shareware) – Preview MacPaint pictures before importing them.

Power Tools – Toggle instantly between tools, without wasting time with the menu! Normally to select a new tool, you have to move the mouse up to the tools menu, select your tool, and go back to your work. After installing PowerTools, you can hit the Enter key, and you'll toggle between the browse, button and field tools. Hit Shift-Enter, and you can quickly move through the other painting tools! It'll save you a lot of time!

StringCase (shareware) – These XFCNs convert text between upper and lower case.

StripDelim – An XFCN that pre-processes text by stripping unwanted characters.

StripIt – A function to strip selected characters from text. Includes pascal source.

ThumbButton (shareware) – Create control bars with indicators inside the "thumb." Similar to a scroll bar, the ThumbButton can be placed horizontally or vertically. The white control box, or thumb, can contain a number indicating the selected value.

TitleBar – This will show or hide the title bar of HyperCard's main window.

UserLevel5 – Force your user level to stay at 5, even if pesky stacks try to change it.

XPict – Draw PICT images at any size, anywhere on the screen, in 8 different modes!

Also included: NewFolder, ShutDown, Flasher, and Effects stacks.

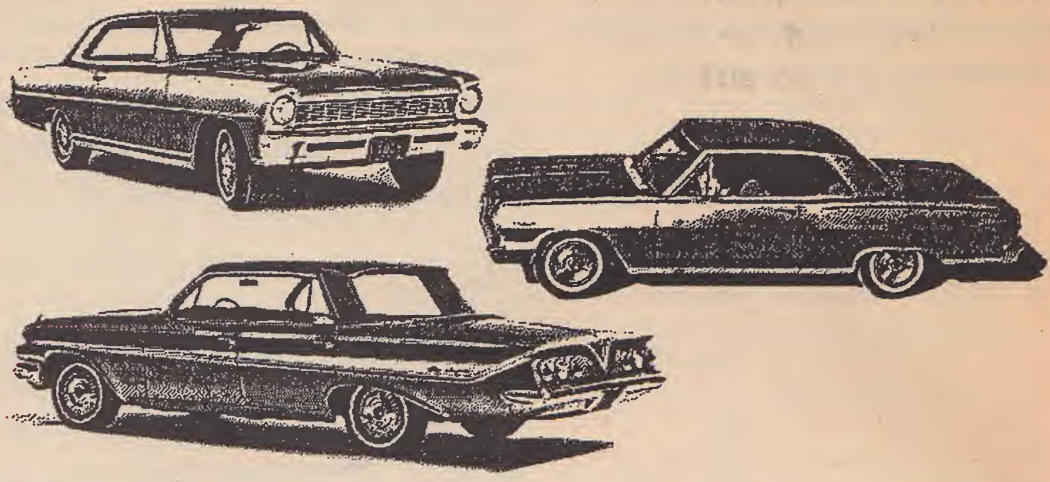
132 Chevy Super Sport Stack

The serious car buff will love this stack, filled with info and pictures for 1961 to 1976 Chevrolet cars.

Because of its size, this stack requires a hard disk drive! It contains statistics, emblems, tables, charts, production specifications, and other information for 53 different models of Chevrolet Impala, Chevelle, Camaro, Nova, and Malibu cars. There is a high-quality digitized picture of almost every car, as well as images of engine insignia. If you're a car collector, car lover, or even if you just need some automotive clip art, you'll like this!



The digitized images included in the Chevrolet SuperSport stack are of the highest quality.

133 CWC³ Wind Chime Stack

This stack describes the products of Celestial Wind Carillons. It's an excellent example of HyperCard as an advertising medium.

Are you thinking about producing a HyperCard-based training disk, or an information stack about your company? Or, are you looking for a wonderful musical gift for yourself or someone else? Either way, you'll get something out of this stack! It's a great example of how to use HyperCard as an educational tool, to tell people about your company or your products.

And, it contains pictures, descriptions, and sound samples of some of the most beautiful wind chimes available, too! Six different models of chimes are previewed in the stack. The chimes are available directly from the manufacturer, and ordering instructions are included.

134 Animation Stacks

Explore the power of animated graphics with these informative and hilarious stacks!

American Gothic – A hilarious take-off on Grant Wood's famous painting! You've always wanted to know what the old couple was saying to each other, and now you can find out! Includes sound effects from a classic sci-fi film.

Rocky's Dream – Rocket J. Squirrel was never like this when you were a kid!

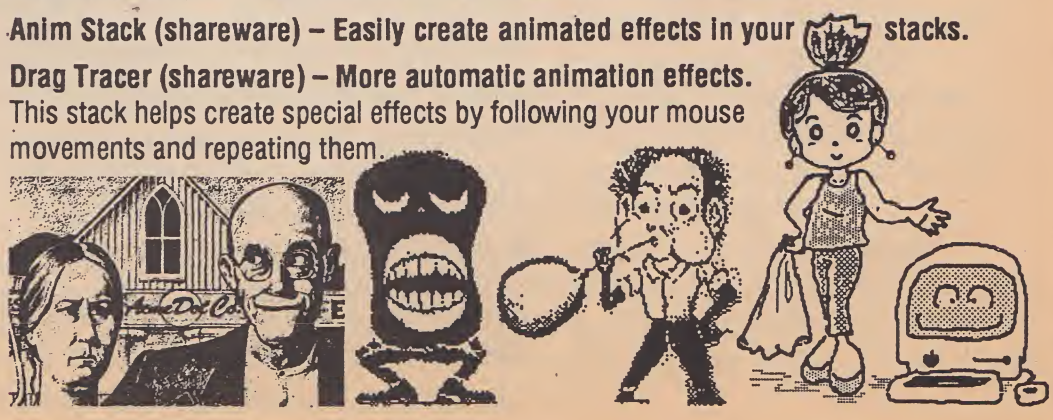
A Funny Day – A cute cartoon with a trick ending, done in the Japanese style.

HyperZoetropes – Six examples of historic animation from the late 19th century.

HyperMutoscopes – Two more old-time flicks, including a Chaplin short!

Anim Stack (shareware) – Easily create animated effects in your stacks.

Drag Tracer (shareware) – More automatic animation effects. This stack helps create special effects by following your mouse movements and repeating them.

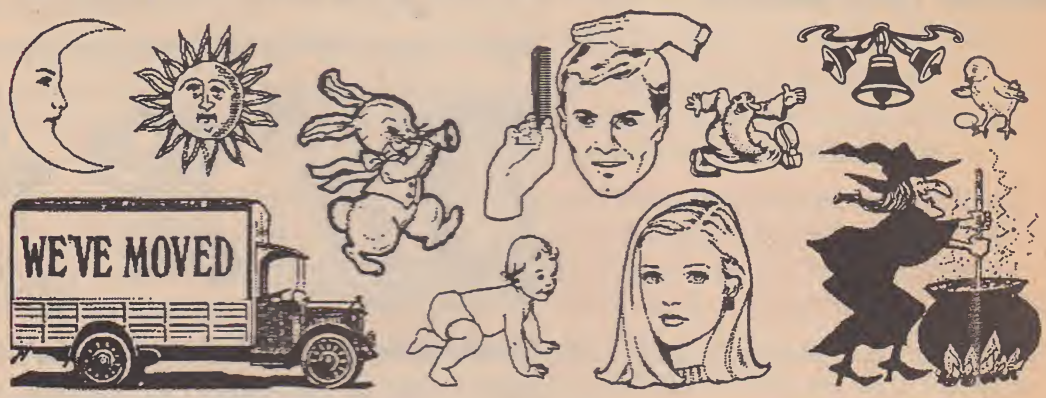


These are some of the outrageous characters that will show off HyperCard's animation capabilities to you in this entertaining cartoon collection.

135 Bill's Clip Art Stack

Five hundred different images in one HyperCard stack, indexed for easy location and selection!

This enormous stack contains five hundred different cards, each with a high-quality digitized image. Categories include people, animals, famous places, tools, home appliances, old-fashioned cars, holiday images, borders, ornamental scrolls, and even pre-Columbian pottery! Most of the images have keywords associated with them, so that by searching for the word "animal," all pictures of animals could be quickly located. The pictures can be used with any program that works with MacPaint style graphics, such as PageMaker, Ready-Set-Go, SuperPaint, MacDraw, and many others.



It's easy to find the image you want with Bill's clip art stack. Type "witch" & you've got a picture of one. Type "Easter" and a suitable image appears. It's that simple!

136 Magazine Index Stacks

Quickly find articles of interest in MacWorld, MacUser, and NibbleMac Magazines.

If you're lucky enough to have a full set of back-issues, or if you have access to them, you can find almost any article of interest quickly and easily with these stacks. This disk contains 3 separate sets of stacks that index articles from the major Macintosh magazines MacWorld, MacUser, and NibbleMac. Article subject, title, issue date, and page number are all included.

The MacWorld index contains articles from the premier issue in 1984 through September of 1987. The MacUser index includes articles between 1986 and 1987. The NibbleMac index features articles from the premier issue in 1985 through December of 1987, and also includes digitized reproductions of the cover art from each issue.

137 Game Stacks for Kids

Some games are too hard for kids... but these aren't; they were created especially for kids.

Dragonsword – Escape the cave, kill the dragon, and rescue the beautiful damsel! Written by 12 year old Nat Ingalls, with Andy Ingalls helping out in the art department.

K'Kal Adventure – Explore a magical castle under the sea, and make new friends! The second grade class of Kaunakakai Elementary in Hawaii created this adventure.

Knight Adventure (shareware) – Even kids that can't read yet will like this game! Ten year old Marshall Ward made this crazy adventure. There's danger at every turn unless you make the right decisions.

Animals (shareware) – Think of an animal, and the Mac will try to guess it! This is the HyperCard version of one of the oldest computer games. The Mac tries to guess your animal, asking yes or no questions, and can learn new animals as you play!

Mr. Potato Head – Roll the dice, and see how fast you can complete your potato man!

The graphics might not be the best in the world, but the games are fun! All were designed to be easy enough for the youngest children to enjoy.

138 KidStacks Collection

An integrated collection of stacks for preschool age children that actually talk as they teach!

The KidStacks collection consists of eight integrated stacks that teach youngsters the basics of the alphabet, numbers, simple math, shape recognition, counting, money, and telling time. All of the stacks are accompanied by a synthesized voice that talks to the child as they learn. Recommended for ages 3 and up.

Money – This teaches the relationships between different coins and paper money.

ABC's – This stack teaches how to draw each letter, number, and basic shape.

Time – Your child will learn how to tell time from a friendly clock person!

Math – Simple addition and subtraction problems are presented here.

This great collection of stacks for preschool kids teaches them about the alphabet and numbers, how to tell time, how to count money, and even lets them drive a car!

Lessons in Spelling – A picture and pronunciation will help reinforce each word.

People – For the older child... Learn to recognize policemen, firemen, and others.

Laura's Letters – This uses a digital human voice to teach the alphabet and numbers!

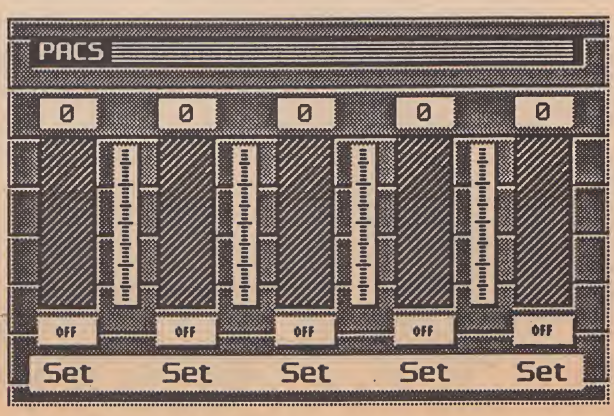
Map – Let your child explore a house, move from room to room, even take a drive! After all that learning, it's time for a little fun! This stack presents an overhead map of a house, and simply by moving the mouse, your child can move between rooms. Clicking on the names of pieces of furniture and other fixtures will display and speak their names. Once they've found their way outside, the child can actually get into the family car and take a drive in the country! They'll get a real kick out of it!

139 MIDI Stacks for Musicians

If you have a MIDI instrument and interface connected to your Mac, you need this disk!

HyperMIDI Toolkit (shareware) – Customize & program your MIDI studio in HyperTalk! This stack contains a collection of sophisticated external commands, functions, and routines that give you almost unlimited control over any MIDI device in your studio. You can set up MIDI macros to automatically send patches or change parameters, create custom sequencers, and much more. Included in the stack are a data analyzer, MIDI filter, step sequencer, Roland D-50 librarian, Yamaha DX-7 envelope creator, and more!

Benson – Retrieve and send MIDI bulk dump data to and from your instruments. With Benson, you can read in any data from your MIDI devices, examine it, manipulate it, and send it back to your MIDI network. For example, you could use Benson as a patch librarian for any MIDI instrument. Includes a 38-page instruction manual and two individual versions of Benson, one for HyperCard 1.1, and one for version 1.2 and up.



Benson's graphic interface gives you control over your MIDI data. The stack includes built-in settings for over 40 of the most common keyboards, and you can create custom settings for other devices.

Network software

140 AppleTalk Utilities

Are you part of a multiple-computer AppleTalk/ LocalTalk network? Check out this disk!

ATView (shareware) – This desk accessory displays info about each node on the net. Displays the node ID, user name, node type, and socket number for each node.

Broadcast – Send messages to and from any users on the network, with the Chooser! Now you can transfer messages between users on the network, in the background! Just select the network user who should receive your message (or select all users), type the message, and it will appear on the screens regardless of what they're doing at the time!

ClockSynch – Remember when they used to say "synchronize your watches?" It's annoying when the Macs on a network have their clocks set to a slightly different time. ClockSynch fixes that by synchronizing the clocks on all connected Macs!

Dopplemaker (shareware) – Protect files on your server from unauthorized copying. You want your network users to be able to access the applications they need, but you don't want them to pirate those programs! Well, Dopplemaker will create "phantom" programs that work just like the originals, but are useless if they are copied!

FolderShare (shareware) – Flexibly assign folder access privileges with AppleShare. This utility works only with AppleShare networks, and allows folder access privileges to be granted to not only the folder creator, but any other user or work group as well.

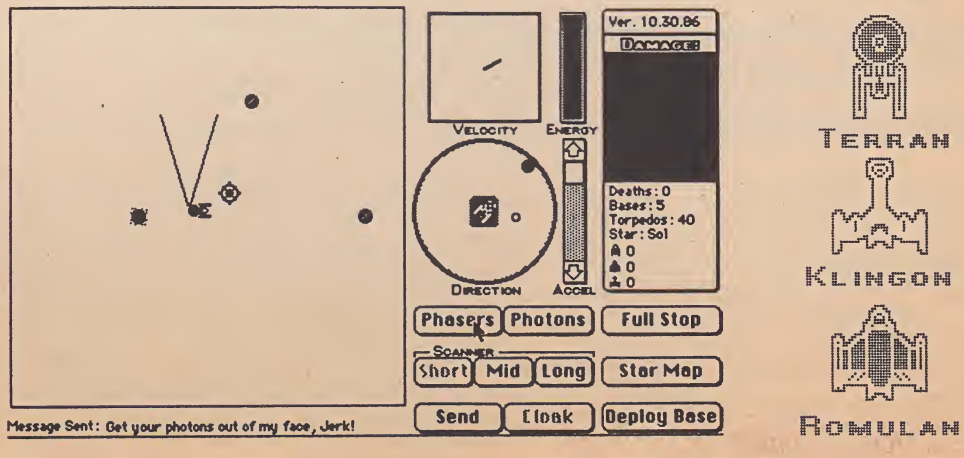
HyperCom™ Promo (demo) – Design and program network functions with HyperCard.

Apple-Jam (shareware) – A teleconferencing program for up to twenty users. Up to 20 people can chat simultaneously with Apple-Jam. Just type your message, and it will be sent to any or all of the other participants. Great for a network staff meeting!

JamPaint (shareware) – Share sketches and drawings over the network in real time! Open JamPaint on one or more networked machines, and when a user draws something on one Mac, their drawing will appear simultaneously on the other Macs. This is great when you want to "rough out" some art ideas with other workers.

SetNode – A control panel device (CDEV) to set the node hints in parameter RAM.

NetTrek (shareware) – Battle for control of the universe in this multi-player game! After the serious work is over, it's time for some serious play! NetTrek is an incredible outer-space combat simulation based on the popular Star Trek television series. Up to 5 players can compete simultaneously, selecting either a Terran, Klingon, or Romulan vessel. You must explore the known galaxy, deploying a base and staking your claim to each of the 8 star clusters. But your opponents might decide to throw a phaser blast or photon torpedo in your way! Unfortunately, this program does not work on the Mac II.



NetTrek is a strategic, stellar conquest game for two to five players. All players compete simultaneously over their AppleTalk/LocalTalk network. You can even send harassing messages to each other!

Mac II Software

141 Misc. Mac II Stuff

A grab-bag of fun and useful graphics and utilities. These programs require a color monitor.

DeskPict – Tired of a gray background? Use a color picture as your desktop pattern!

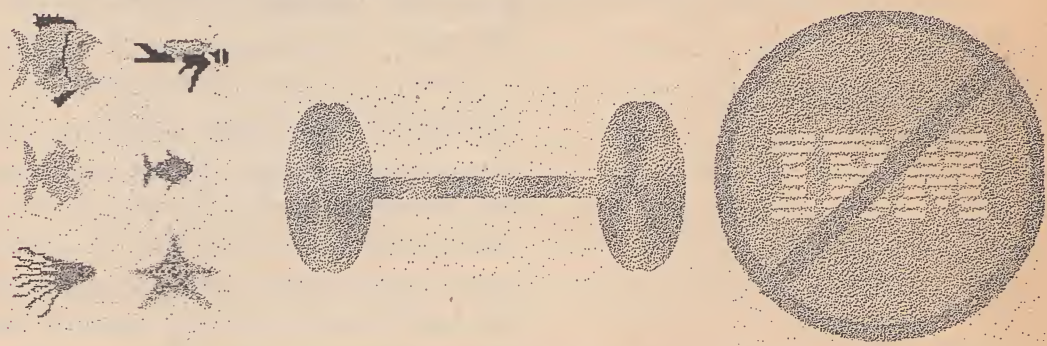
No IBM! – Let your true sentiments be known with this flashy startup gag!

ScreenMaster (shareware) – Improve software compatibility & startup screen colors. Some programs run into compatibility problems because of the Mac II's larger screen size. This CDEV utility allows you to choose between your standard screen size and the smaller MacPlus/SE screen, which allows some programs to work properly. It also forces startup screens to retain their original CLUT color tables, making them look better.

ColorCursor – This changes your mouse pointer to a rainbow-colored arrow!

Fish! (shareware) – Watch crazed and colorful fish swim around on your desktop! This CDEV utility is one of the wackiest programs for the Mac to date! It installs a number of animated swimming fish that cavort through your background pattern, swimming around behind your icons! The fish are completely editable, so you could conceivably add mermaids, submarines, and other characters to the cast!

The author of the kooky Fish! CDEV says it's his goal to have "a fish on every desktop!" Spectra produces incredible animated color wheels. The "No IBM!" program will let the world know how you feel about the competition.



Toggle Cache – Turn the 68020 instruction cache on and off for greater compatibility.

Graphics Demos – A collection of fourteen spectacular color graphics demonstrations! These graphics programs demonstrate the incredible color capabilities of the Mac II in a variety of interesting ways, and are guaranteed to blow away any of your unbelieving coworkers and friends.

142 Image Processing

Three programs for color image conversion, image processing, and color separation production.

VisionLab (demo) – Convert images between 6 popular Macintosh graphics formats. VisionLab's primary function is to convert color images between several standard formats. Images can be translated between PICT data files, PICT resources, Thunderscan documents, MacPaint files, PixelPaint documents, and GIF, a highly compressed storage format that can reduce the size of color images by up to 90%! Color images can also be dithered in six different ways, producing images compatible with black-and-white Macs. This demo has some features disabled, such as printing and TIFF compatibility.

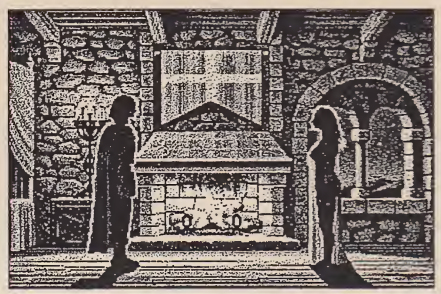
Image – A full-featured image processing, enhancement, and colorizing utility. This program was designed to enhance, analyze, edit, animate, print, and colorize gray-scale images on the Macintosh II. It can produce density histograms, do digital filtering, perform contrast enhancement, and much more. It also supports image capture with the Data Translation QuickCapture frame grabber card. The program requires a Macintosh II with at least two megabytes of memory, and works best with five or more megabytes.

Separator – A color separation processor for PixelPaint documents. If you need to produce color separations from a PixelPaint file, this makes it easy! It produces four separate files that can then be printed on a Linotronic typesetter.

143 Mac II Fantasy Images

Seven spectacular full-color images of dragons, sorcerers, and other fantasy themes.

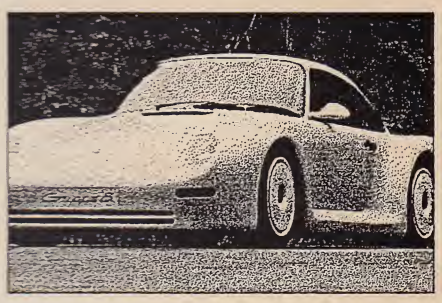
Our Mac II image disks contain some of the finest color pictures availabe. Each disk includes the Giffer utility, which lets you view the images and save them as PICT files for use as startup screens, backdrops (with DeskPict from disk 141), and other purposes.



144 Mac II Auto Images

You'll love these color pictures of some of the world's most powerful driving machines!

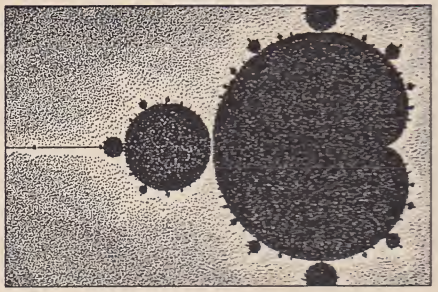
If you're a car buff, you won't believe the pictures on this disk! You'll get incredible color images of a Z-28, 944 Turbo, Lambourghini Countach, Maserati Bora, and more!

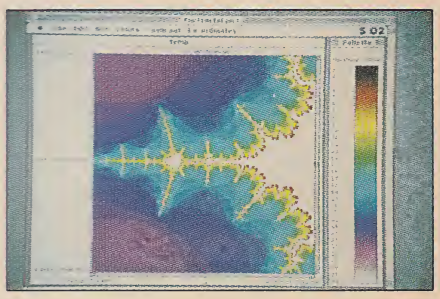


145 Color Fractal Graphics

Explore the fantastic world of the Mandelbrot set with these fractal graphic generators.

Fractal graphics are mathematically calculated plots of a specifc set of numbers called the Mandelbrot set. These calculations create infinite and beautiful recursive designs, and are used in many various applications today. This disk contains ten different programs that generate fractal images in dazzling colors.





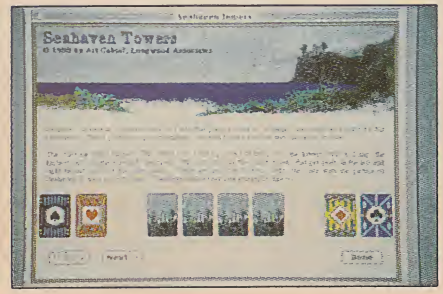
146 Color Mac II Games

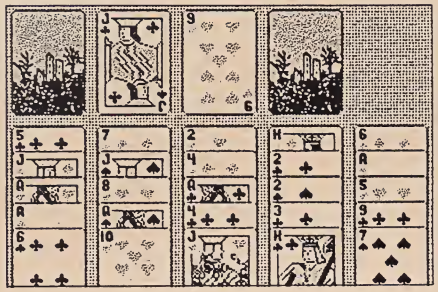
Time for a little fun and games – in color! Play solitaire card games, or play Hangman against the Macintosh!

Seahaven Towers™ (shareware) – An original and addictive solitaire card game.

Canfield (shareware) – A color variation of a more traditional solitaire game.

Hangman Plus (shareware) – Can you guess the computers word before you hang?

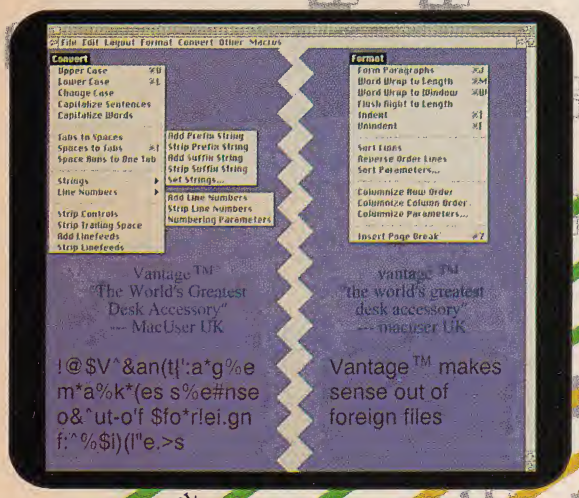




The Preferred Solutions Series™

VANTAGE™

The Finest Turbo Text Tool & Spell Checker for Word Processing, Page Layout & Databases



- Full Color Control
- Adds or Removes Line Feeds
- Opens Up To 16 Simultaneous Windows
- Windows Can Contain A Different WP Format
- Sorts Lines Backwards & Forwards
- Complete Automated Macro System for Greater Productivity
- Comprehensive Batch Look-up, & Phonetic Spell Checker
- Re-organizes Imported Text From Mainframes, PC's, & Unix Systems
- No Limit On Document Size
- Re-organizes & Sorts Sentences, Paragraphs, & Columns
- Adds Alpha/Numeric Markers To Each Line Of A Document
- Converts Multiple Spaces To Tabs & Vice Versa
- Capitalizes Sentences & Words
- Strips & Adds Carriage Returns
- Creates Lists Of All Files And Folders On Disk
- Works With MAC™ 512+, System 4+, & Multifinder™
- Works With Color Display & Multiple Screens
